Application/Control Number: 10/635,561 Page 2

Art Unit: 2613

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

- 2. Claims 1-16 are rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential steps, such omission amounting to a gap between the steps. See MPEP § 2172.01. The omitted steps are: in claim 1, the applicant claims "estimating..." yet it does not appear it this step is then used in any way. The feedback signal is based on the extracted and processed signals. Likewise, in claim 9, the digital signal processor estimates amplitude and phase. It is unclear why it does this since the estimated signal is never used. It is further unclear why in claims 4 and 13, these signals are never used. In claim 9, it does not appear that a separate output signal is supplied by the estimating.
- 3. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

- 4. Claims 1-16 are rejected under 35 U.S.C. 101 because in claim 1, the applicant claims "estimating..." yet it does not appear it this step is then used in any way. The feedback signal is based on the extracted and processed signals. Likewise, in claim 9, the digital signal processor estimates amplitude and phase. It is unclear why it does this since the estimated signal is never used. It is further unclear why in claims 4 and 13, these signals are never used. In claim 9, it does not appear that a separate output signal is supplied by the estimating. Under the present guidelines of 101, the method/function lacks usefulness because this function/method step is not used.
- 5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Buchman et al, Takehano, Nagakubo, Miyata, Schaffner and Fujiwara teach intensity modulators that monitor the input and output to come up with correction signals.
- 6. It would appear that none of the above references teach estimation of phase and frequency band to cancel a required frequency. It would appear that the applicant has allowable subject matter. It would appear that if the above 112 problems were corrected to include the connection/method of using the correction signal from the estimation means/step; the application

would be allowable over the prior art. This would also overcome the 101 rejections. If the applicants have questions, they are welcome to call the examiner.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Leslie Pascal whose telephone number is 571-272-3032. The examiner can normally be reached on Monday- Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jason Chan can be reached on 571-272-3022. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
